

HACKFLUENCE 2026

FIRST 3SEC AI.

THEME SELECTED – AI FOR CREATOR TOOLS

TEAM NAME : TECH PEOPLE

TEAM MEMBERS:

Soumya Pandey (Team Leader)

Diya Raj

Gourav Paliwal

Trisha Singh

INSTITUTION

Guru Tegh Bahadur Institute of Technology

Creators don't lose the video. They lose the **first three seconds.**

PAIN • 01

In the creator economy, getting **liked** by the audience is the main need of creators.

PAIN • 02

Creators waste hours scripting different “**hooks**” and guessing which one would retain users.

WHO BLEEDS WHEN THE HOOK FAILS

Creators

Discouraged — hours of editing, single-digit views.

Editors

High-quality cuts go unseen because the intro is weak.

Brands

Sponsorship budgets burn on content that can't hold attention.

Viewers

Bored — they swipe past potentially good content because of a slow start.

THE BUILD

FIRST 3SEC AI

An AI tool that turns raw script ideas into 5 **distinct hooks** using **virality frameworks**, scores each hook's potential, and provides **dynamic performance advice**.

HOW IT WORKS IN ONE BREATH

paste topic → 5 hooks → virality score → copy & ship

WHAT YOU GET

A dashboard for creators.

Paste a transcript or topic. Get 5 high-converting hook variations — curiosity gap, negative framing, and more.

It scores. Then re-engineers.

Instead of just writing scripts, FIRST 3SEC AI **scores** and **re-engineers** hooks using proven psychological copywriting archetypes and historical virality trends.

3sec.

THE ONLY WINDOW THAT MATTERS.

Built to be **fast, strict, and structured.**

// CORE INFRASTRUCTURE

[01]

Python

Programming foundation for the entire application.

[02]

Streamlit

UI framework — the frontend creators actually touch.

[03]

OpenAI API

Core engine powering the script re-writes.

[04]

Pydantic

Validator — forces the AI to output zero-bug, structured data.

// MODELS & FORMATS

[05]

gpt-4o-mini

Ultra-fast LLM handling text processing.

[06]

Structured JSON

Strict structural output format.

[07]

Pip

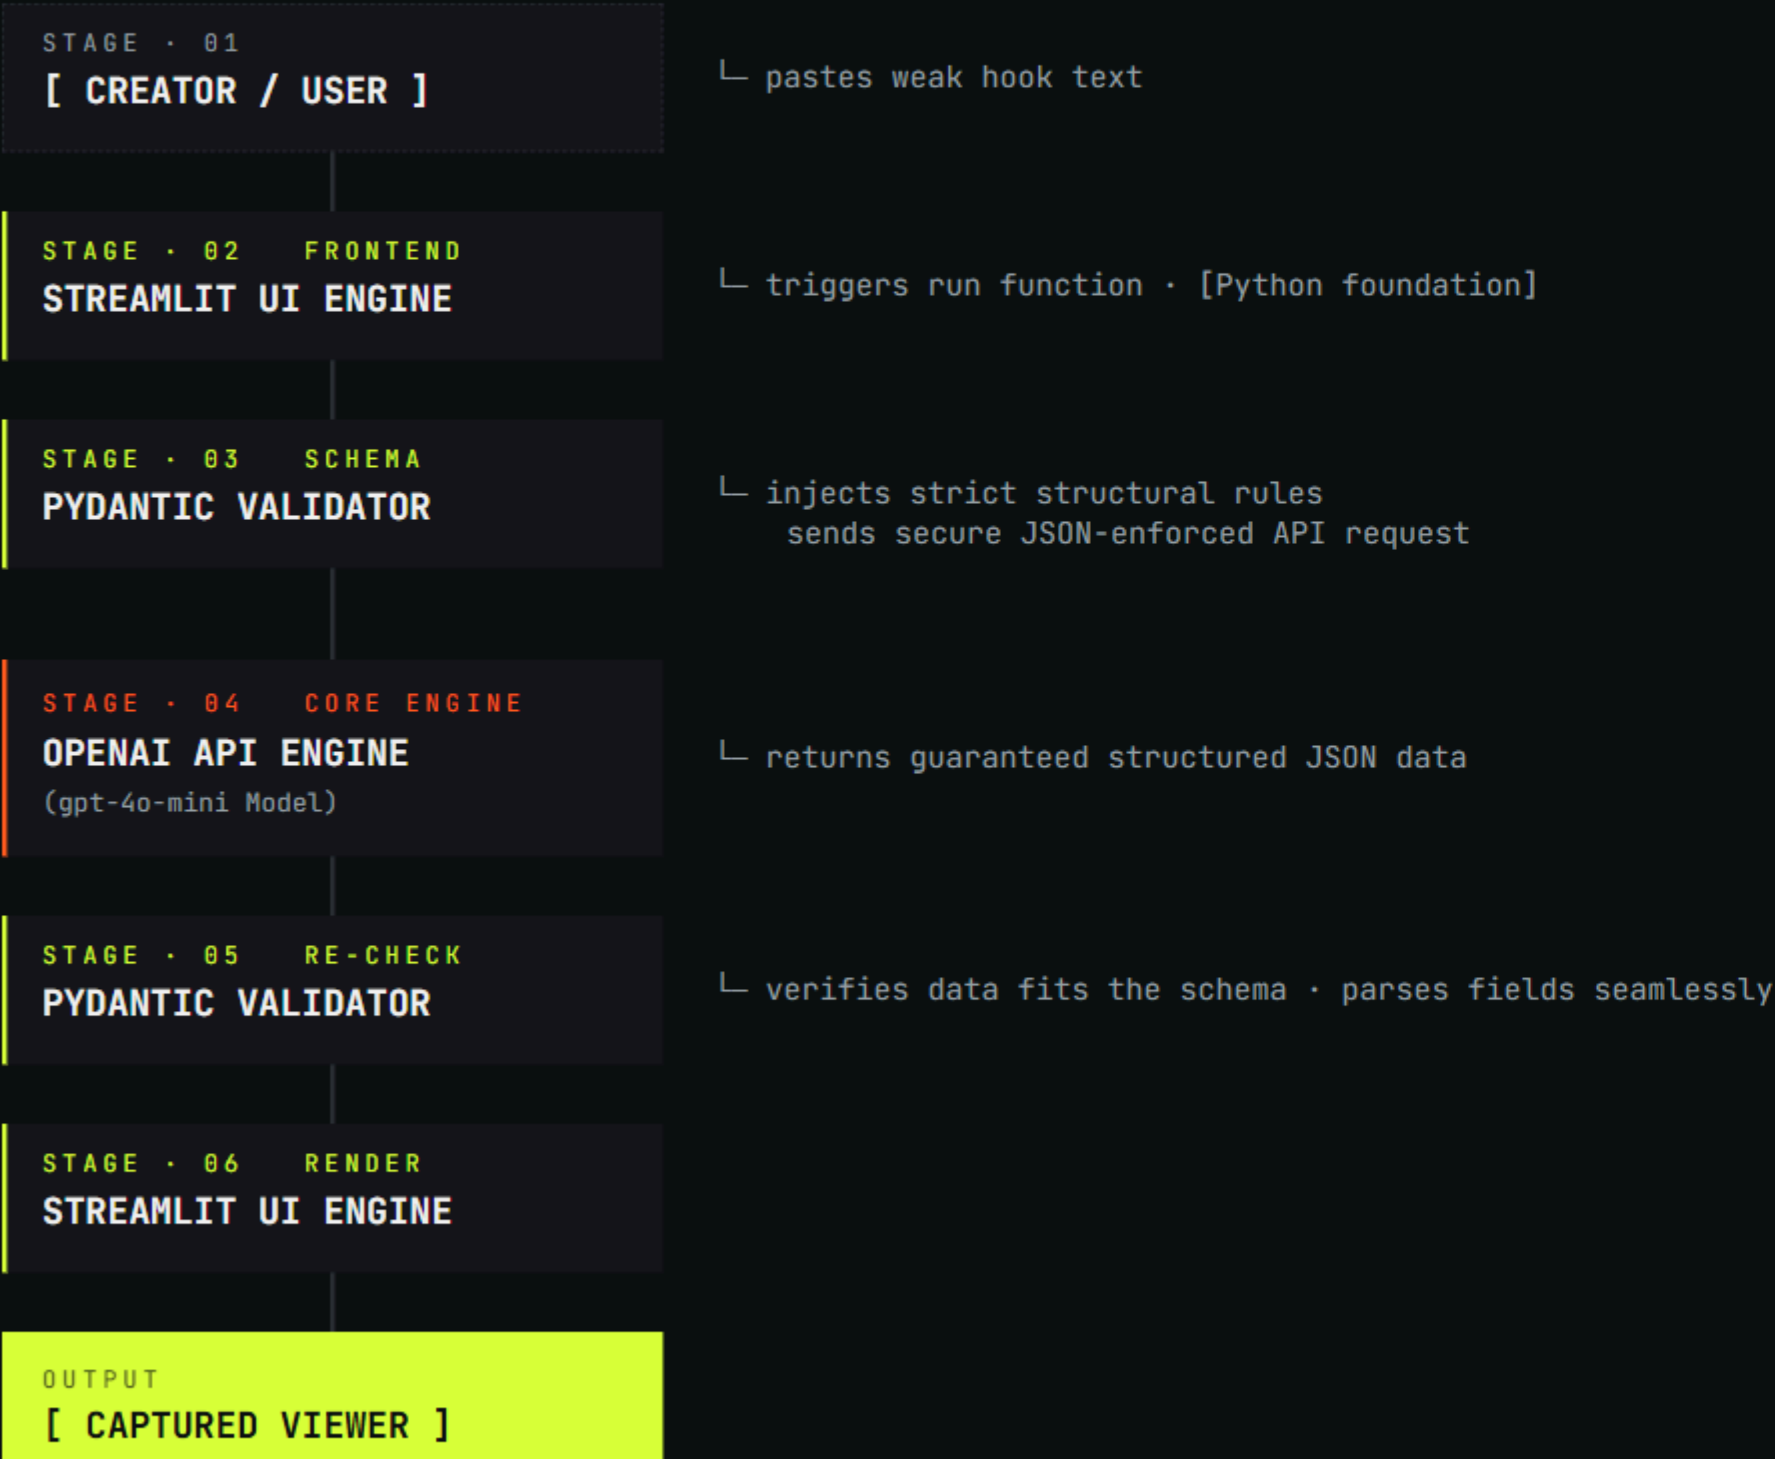

Python's installer — keeps the toolchain clean.

[08]

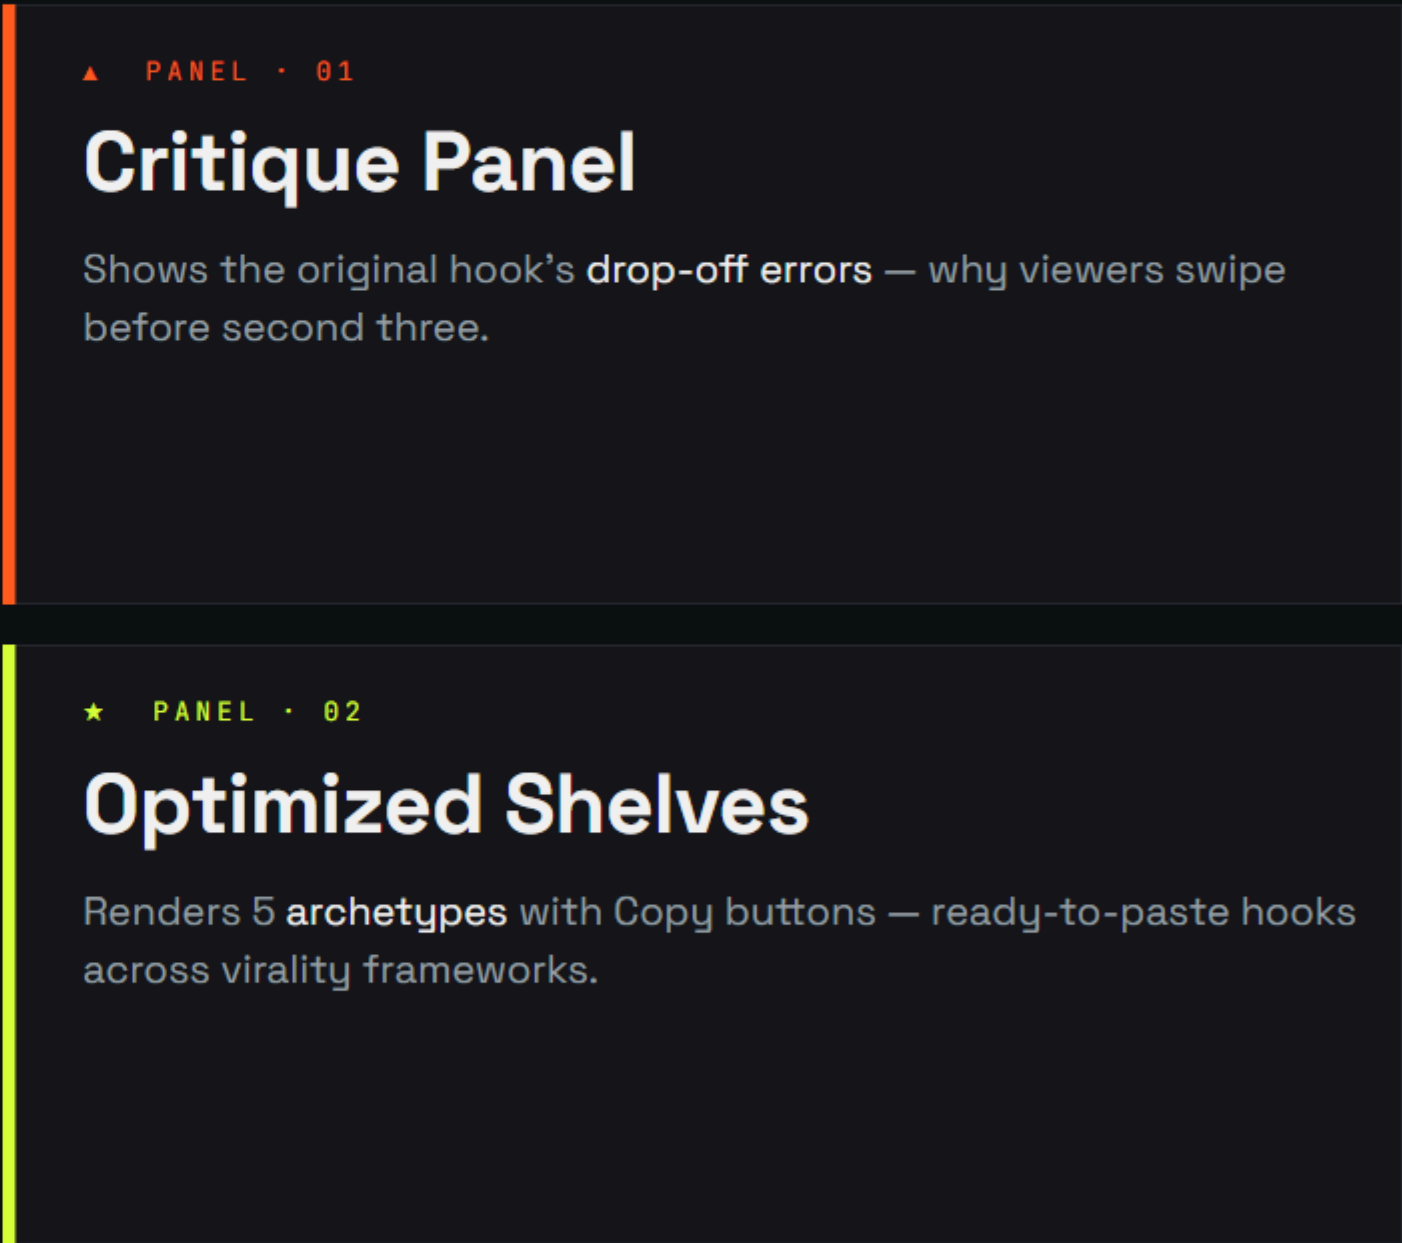

Streamlit Cloud

Hosting layer — ship and iterate fast.

One pipeline. **Weak hook in**, optimized hooks out.

// FINAL RENDER LAYER

■ data flow · ■ core engine · ■ output

Why this isn't “another AI writer.”

Three commitments shape every output FIRST 3SEC AI ships.

01

PRINCIPLE

Hyper-Focused, Not a Generalist.

Instead of writing an entire video script, FIRST 3SEC AI works exclusively on the **most critical 3 seconds** of short-form content — one problem, solved deeply.

02

PRINCIPLE

Guaranteed Formatting Structure.

Pydantic paired with OpenAI's engine **eliminates random AI formatting bugs** — the output is always clean, parseable, ship-ready.

03

PRINCIPLE

Psychology-Driven Architecture.

Variations are organized around **proven psychological hook frameworks** — and every output explains **why** it works, with real-time visual direction.

Three tiers.

FREE TIER

The Hook & Growth Driver

₹0 /month

FOR

Aspiring creators & hobbyists.

LIMIT

5 free hook scans / month.

ACCESS

2 basic copywriting archetypes + standard text output.

CREATOR PRO

Active Creators

₹300 /month

FOR

Active YouTubers, TikTokers & social-media managers.

LIMIT

Unlimited hook variations and scans.

ACCESS

All premium psychology frameworks, advanced virality scorecards, high-retention audio/visual execution cues.

AGENCY & ENTERPRISE

Teams & Studios

₹2500 /month

FOR

Media agencies, production houses, content-coaching businesses.

WORKSPACE

Multi-user team workspaces, bulk script importing.

ACCESS

Multi-user dashboards — scriptwriters, video editors, creative directors review, comment, and approve hooks in one pipeline.

From hook writer → hook coach.

Three upgrades on the roadmap — moving FIRST 3SEC AI to it's next version.

PHASE • 01

Self-Correction Engine

Train the AI on each creator's **real performance metrics** — so HookCraft automatically learns what actually works for specific niches in real time.

▷ LEARNS • PER NICHE

PHASE • 02

Speech & Tone Evaluation

Creators speak their hooks into the app. The AI analyzes **vocal energy, pacing, and inflection** — then suggests performance corrections.

▷ VOICE • DELIVERY

PHASE • 03

Visual Frame Analysis

Scan the first **3 seconds of video frames** to detect boring text fonts, poor lighting, or slow visual framing — so the visual hook matches the script's energy.

▷ FRAME • BY FRAME

WE BUILT IT FOR THE FIRST 3 SECONDS.

Thank you.
